

# 40W solar power requires an inverter

## Overview

---

The short answer is that most solar panel systems will require an inverter. 40w solar panels are designed to produce 40 watts of power per hour under standard test conditions (STC) which include radiation of 1 kW/m<sup>2</sup>, a cell temperature of 25°C, and no wind. But in the real world on average you can expect 80% of the output from their full capacity. Also, sun hours will play. But before you start soaking up the sun, you'll need the right inverter to match your system. The need for an inverter size chart first became apparent when researching our DIY solar generator build. How much power do your appliances use?

This is an important question to answer when considering a. The inverter is one of the most important components of a home or portable solar power system.
