

50mw wind farm power generation

Overview

The engineering scale of a 50 MW floating wind turbine is unprecedented. The increase to 50 MW, which is almost three times that capacity, necessitates radical adjustments to materials. As the global leader in offshore wind development, a Chinese turbine manufacturer has designed a two-headed behemoth that will generate 50 megawatts on its own. Zhongshan-based Mingyang Smart Energy, a global leader in semi-direct drive technology for offshore. China's Mingyang Smart Energy has unveiled plans for what could become the world's largest floating offshore wind turbine, a 50 MW-class unit, marking another advancement in the global offshore wind race. The capacity of the world's largest floating wind turbine would be nearly double that of the largest design currently. An important turning point for the offshore wind sector has been marked by the announcement of plans for the largest 50 MW floating turbine in the world by Mingyang Smart Energy, one of the nation's leading clean energy companies, according to Bloomberg.
