

A non renewable energy source is

Overview

Natural resources such as, (crude oil) and take thousands of years to form naturally and cannot be replaced as fast as they are being consumed. It is projected that fossil-based resources will eventually become too costly to harvest and humanity will need to shift its reliance to such as solar or wind power. An alternative hypothesis is that carbon-based fuel is virtually inexhaustible in human terms, if one incl.

A non renewable energy source is

What Is Nonrenewable Energy: Definition and Examples

Nonrenewable energy is simply energy provided by sources that don't renew naturally in a relatively short time period. We're consuming nonrenewable sources faster than they replenish, which

Non-renewable resource

Today's primary sources of energy are mainly non-renewable: natural gas, oil, coal, peat, and conventional nuclear power. There are also renewable sources, including wood, plants, dung, falling water, geothermal ...

Renewable and Nonrenewable Resources

Nonrenewable resources, on the other hand, are either finite or else they replenish very slowly, usually over geological time spans. Once these resources run out, they're gone.
