

Advantages and disadvantages of magnesium aluminum zinc photovoltaic bracket

Overview

A comprehensive comparison of their advantages and disadvantages reveals significant differences impacting installation, durability, and lifecycle economics. Hot-dip galvanized U-channel is a well-established solution. China's tariffs cancel aluminum tax rebates, zinc-aluminum-magnesium brackets gradually replace aluminum brackets. Let's take a closer look at the pros and cons of both materials for solar racking systems. Lightweight and high strength: Aluminum alloy brackets are light, only 1/3 of steel, and easy. Zinc-Aluminium-Magnesium is an alloy metal, which is an electroplated steel sheet with a certain amount of Al and Mg added to the existing hot dip galvanised coating. It is an alloy metal with excellent comprehensive performance.
