

Air film solar photovoltaic panels

Overview

is a low cost, high performance, self cleaning frontsheet film to replace glass in thin film, flexible PV modules. Our film allows your modules to offer high efficiency, lightweight capabilities for portability in military and recreational field applications. Thin-film solar cells are a type of solar cell made by depositing one or more thin layers (thin films or TFs) of photovoltaic material onto a substrate, such as glass, plastic or metal. Also used in lightweight rigid modules. Have you ever encountered " flexible solar panels " or "stick-on solar panels"?

Both fit under the broader umbrella of thin-film solar panels, a type of solar panel technology known for being lightweight while still producing renewable solar energy. Compared to traditional solar panel cells holding. Thin-film solar technology has been around for more than 4 decades and has proved itself by providing many versatile and unique applications that crystalline silicon solar cells cannot achieve. Each one can be used in different scenarios. PowerFilm's flagship thin-film material is based on Amorphous Silicon (a-Si) PV technology.

Air film solar photovoltaic panels

Thin-Film Solar Technology

PowerFilm's flagship thin-film material is based on Amorphous Silicon (a-Si) PV technology. This technology is highly flexible, durable, lightweight, and has excellent indoor and low-light performance.
