

Application of double-glass components on curtain walls

Overview

Double glazing involves two layers of glass separated by an air gap. This design improves insulation, reduces heat loss, and enhances soundproofing. It is ideal for varying climates and is often the standard in modern buildings. Glass curtain walls are lightweight aluminum-framed facades housing glass panels. Curtain walls are often part of a building envelope. A curtain wall system is a non-load-bearing exterior façade that hangs like sophisticated skin from a building's main structure. These traits allow for glass curtain wall systems that just weren't. This article will explore the features, benefits, design considerations, and installation process of double glass curtain walls. Stick-build curtain wall.
