

# Application of uninterrupted power supply for communication base stations

## Overview

---

In this work, an analysis of methods for providing mobile communication base stations with uninterrupted power supply was conducted. As a result of the analysis, the shortcomings and advantages of the existing system were identified. Practice shows that the existing energy supply sources - the power grid, diesel generators and batteries - do not allow for effective operation in. Telecom power supply systems form the backbone of modern telecommunications. Power outages can lead to a decrease in communication quality or even complete service interruptions, negatively affecting users and threatening system reliability. This includes backup power options that supply power instantly in the case of a. base station (BS), uninterruptible power supply, hybrid power system (HES), photovoltaic solar panels, wind generator, energy management system (EMS), diesel generator, battery, energy efficiency.

## Application of uninterrupted power supply for communication base

---

- 50KW/100KWH
- HIGHER POWER OUTPUT IN OFF-GRID MODE
- CONVENIENT OPERATION & MAINTENANCE
- PRE-WIRED

### Mathematical Modelling of the Power Supply System of a Mobile

Using the Proteus software, a simulation model of an uninterruptible power supply system for mobile communication base stations was developed. Based on this model, experimental tests were conducted.
