BESS

## Overview

---

Equipped with an electromagnetic wave antenna, often placed on a tall mast, the base station enables communication between mobile terminals (such as mobile phones or pagers) and the fixed part of the digital telecommunications network. A base station represents an access point for a wireless device to communicate within its coverage area. Base stations typically have a transceiver, capable of sending and receiving signals. Baseband Unit (BBU): Handles baseband signal processing. They provide the coverage you need for calls and data.
