

Battery cabinet eco mode

Overview

eConversion provides a combination of maximum protection and highest efficiency, that permits to reduce the electricity absorbed by the UPS by a factor three compared with double conversion. System Operation Mode: The operation mode of the complete UPS system. The ECO-B418LP-2N is a free-standing battery cabinet featuring pack-level liquid cooling and cell-level temperature balancing. It maintains temperature differences within 3 °C between cells, enhancing temperature. The Vertiv™ Liebert® EXM UPS provides efficient and economical operation with a flexible power system offering scalable and redundant features optimized for midsize IT and critical power applications. State-of-the-art electrical performance options available: wide input voltage range, high overload, short-circuit. You can set the priority for switching between the grid mode and the inverter mode, easily charge the batteries and power the load. When the grid fails, it automatically switches the grid power to the battery to provide uninterrupted power to the load. A UPS system provides immediate backup power during an outage.

Operation Modes

The batteries are charged when the UPS system is in ECO mode. The main advantage of ECO mode is a reduction in the consumption of electrical power compared with double conversion.
