

Battery pack temperature and humidity requirements

Overview

Keep storage temperature around 59–77°F (15–25°C) and relative humidity under about 60%. Store at partial state of charge, typically 40–60% (e. 85 V per cell for hobby packs). Use purpose-built, vented containment—not sealed boxes—for storage and charging. If you live in a. Lithium-ion batteries perform best in environments with moderate temperatures, typically between 20°C and 25°C. High temperatures can lead to thermal runaway, a dangerous condition that can cause fires or explosions. Humidity should also be controlled to prevent corrosion or damage to battery. If you work with lithium polymer (LiPo) batteries long enough, you learn two truths: most failures are preventable, and prevention lives in the mundane—temperature discipline, the right containers, and clean environmental control. If the battery pack is fully charged, removed from the equipment, and stored at 20°C (68°F) or less, then it should have maximum shelf life of six months.

Battery pack temperature and humidity requirements

Optimal Storage Temperature & Humidity for Lithium Batteries

Generally, the optimal storage temperature range is 0° to 25°. Within this range, the battery's self-discharge rate is slower, effectively extending its lifespan. If temperatures are too high ...

What's the Optimal Lithium Battery Storage Temperature? Balancing

Operating Temperature: Most Li-ion batteries function optimally between -20°C to 60°C (-4°F to 140°F) during use. However, charging is safest between 0°C to 45°C (32°F to 113°F). Extreme cold reduces ...
