

# California solar energy transnistria

## DISTRIBUTED PV GENERATION + **ESS**

## Overview

---

Solar power has been growing rapidly in the U. state of California because of high insolation, community support, declining solar costs, and a renewable portfolio standard which requires that 60% of California's electricity come from renewable resources by 2030, with. Welcome to Transnistria's energy revolution, where Soviet-era infrastructure meets cutting-edge energy storage solutions. As the global energy storage market balloons to \$33 billion annually [1], this disputed territory offers surprising lessons in sustainable development. [1] Much of. Take Transnistria - this breakaway region still relies on 1960s-era thermal plants for 80% of its electricity [2]. When Moldova tried integrating solar farms last year, grid stability issues forced renewable curtailment rates as high as 40% during peak generation hours. and has been a longtime champion of solar because of the many economic and environmental benefits it provides, including billions in local investment. California has over 49,000 MW of installed capacity and solar supplies more than 31 percent of.
