

# Can the integrated solar panel be equipped with more solar panels

## Overview

---

While it's generally possible to integrate more panels into an established setup, the decision hinges on factors such as system compatibility, available roof space, and the potential need for additional equipment or modifications. The good news: expanding an existing solar PV system is now easier and more affordable than ever. Globally, solar installations increased by approximately 33% in 2024, reaching nearly 600 GWdc of cumulative capacity. If there's enough available installation space, the cost of adding extra panels may be beneficial to maximize. Sometimes, you'll outgrow the original solar system installed on your roof, and you might need to add some more panels to meet your additional electricity needs.
