

China Resources Wind Power Plant

Overview

The Cangnan Project is China's first offshore wind grid-parity project and the China Resources Group's inaugural domestic offshore wind farm. More than 50 large coal units were commissioned in 2025, up from fewer than 20 a year over the previous decade. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green and low-carbon transformation of its energy sector, according to the National Energy Work Conference 2026. This is in addition to China's already operating 1. These victories include the Wind Power Project of the Year - China category for its Cangnan Project; the Standby Power Plant of the Year - Gold. China is seeking to take a leading position in wind power by developing the largest wind farms, introducing the latest technology and actively increasing the share of renewable energy in its energy system.

China Resources Wind Power Plant

How China adds more renewable energy than any other economy

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn
