

Chinese Academy of Sciences talks about new energy storage

Overview

China has achieved a major breakthrough in compressed air energy storage (CAES) technology after an engineering team developed the world's most powerful CAES compressor, the Chinese Academy of Sciences (CAS) said on Thursday. The compressor was developed by the Institute of Engineering. On Septem, the 9th Western energy storage Forum and Xinjiang energy storage technology innovation system construction seminar was grandly opened in Urumqi, Xinjiang. Zhu Junqiang, academician of the Chinese Academy of Sciences and director of the Bureau of major scientific and. According to information shared at the forum, by the end of September 2025, China's new energy storage installed capacity had reached 103 GW, over 30 times higher than at the end of the 13th Five-Year Plan, accounting for more than 40% of the global total, ranking first in the world. Moreover, energy and environmental challenges have stimulated great interest to replace gasoline engine.
