

Climate change equatorial guinea

48V 100Ah

Overview

In 2023 alone, heavy rains, flooding, droughts have destabilized over 4.8 billion people. Its vulnerability to climate change is evident, with the ND-GAIN index ranking the nation low in climate-readiness, at 181st of 185 nations. Equatorial Guinea is especially vulnerable. This page offers a comprehensive overview of Equatorial Guinea's climate zones of temperature and precipitation with reflection of their climatological seasonal cycle, drawing on the Köppen-Geiger classification system and recent historical data from the Climatic Research Unit (CRU). To deepen the understanding, Equatorial Guinea is a small nation located along the Central-West African coast and within the Congo Basin, comprising a mainland territory, Rio Muni, and five islands, where the capital, Malabo, is located. With a population of approximately 1.5 million, the country is particularly vulnerable due to its geographic and climatic conditions, which are characterized by high levels of rainfall and rising temperatures. 2025-2035 Equatorial Guinea Nationally Determined Contribution.
