

# Colored Solar Photovoltaic Panels

## Overview

---

Taking inspiration from the 3D photonic structures on a Morpho butterfly's shimmering blue wings, scientists at Germany's Fraunhofer Institute for Solar Energy Systems ISE have developed colored solar panels that can be incorporated into a building's exterior practically invisibly. Taking inspiration from the 3D photonic structures on a Morpho butterfly's shimmering blue wings, scientists at Germany's Fraunhofer Institute for Solar Energy Systems ISE have developed colored solar panels that can be incorporated into a building's exterior practically invisibly. Photovoltaics, or solar panels, gather solar energy from the sun and convert it to electricity that may be used to power homes or businesses. These panels might be used to supplement a structure's energy needs or to provide electricity to far-flung areas. Their color depends largely on the crystalline structure of this semiconductor (which in nature appears blue-grey) and the way it interacts with light. However, the trade-off is that colored panels typically produce slightly less energy. According to research from the National Renewable Energy Laboratory. Colored solar panels maintain efficiency comparable to conventional ones. They offer an aesthetic integration with the architecture, being ideal in historic buildings.
