

Common installation forms of photovoltaic brackets

Overview

The most common installation technique for modules is using solar panel mounting brackets, which are securely connected to the solar panels and foundation structure through bolts, welding, and other methods. The materials used to manufacture and install photovoltaic arrays must be able to withstand various harsh environments at the project site to ensure 25 years of weather resistance and corrosion. The photovoltaic bracket is a bracket designed for placing, installing and fixing solar panels in a solar photovoltaic power generation system. Common materials include aluminum alloy, carbon steel and stainless steel. As a foundational component. of foundations commonly utilized in large-scale P V plants. These types of foundations ordered from the lower to the higher cost-effective installation are : driven piles,earth-screws, helical piles and ballasted foundations.
