

Converting wasteland hillside into solar power station

Overview

In a groundbreaking initiative, SolarBank Corporation has partnered with Viridi to transform a closed landfill in Buffalo, New York, into a sustainable solar energy facility. The Mount Olive project in New Jersey is a model for turning a brownfield site into a “brightfield,” supporting cleaner power generation and providing a wealth of benefits for the local community. However, we should not assess risks and costs in a silo; they must be contextualized within today's industry realities. Solar developers' business reality has changed drastically. The installation includes four solar arrays with nearly 15,000 ground-mounted photovoltaic panels. The 213-acre site, once filled with refuse, will now. Landfill gas and solar power might seem like separate concepts, but did you know that transforming a landfill site into a solar site is entirely possible?

It's an effective way to extend the life of a landfill gas project while boosting its potential. 06 megawatt (MW) solar array with a 1.
