

# Deep processing of old photovoltaic panels

## Overview

---

Solar panel recycling is a multi-step industrial process that separates glass, aluminum, silicon, copper, silver, and polymers from end-of-life photovoltaic modules using mechanical, thermal, and chemical treatments. These modern approaches aim to address the growing challenge. Three Europe-based industrial experts develop recycling of photovoltaic panels that would otherwise end up in landfills. Solar energy plays a major role in the clean energy transition. At the heart of photovoltaic technology lies highly purified silicon, which turns sunlight into electricity. Modern recycling facilities can recover between 85 and 95 percent of a panel's. Developed at NTU Singapore, a new device can quickly rejuvenate and extend the life of old and new solar panels using heat and light. EtaVolt's innovative PV rejuvenation device.

## Deep processing of old photovoltaic panels

---

### **New device can restore old PV panels to their former glory**

As EtaVolt explains, when precise temperature and intense light are applied to solar cells, they excite material molecules, causing them to move quickly, changing their arrangement and repairing

---

### **An environmentally friendly process for Si recovery from end-of-life**

This study proposed a green, high-efficient, and low-cost process for silicon recovery from waste PV panels by combining solvent swelling and mechanical crushing.
