

Overview

With focus on market efficiency, efficient allocation of resources and security of supply, the report describes demand response from a microeconomic perspective and provides empirical observations and case studies. The report aims at evaluating benefits from demand. Denmark has recently set a legislation called Market Model 3.0 to make the ecosystem for demand-side flexibility more attractive to stakeholders involved. The main change is to relax the previous mandate that required each aggregator to be associated with a retailer and a balance responsible party. This can be a crucial element to tackle the volatility in the market. A LOPEZ for the Joint Research Center of the European Commission made it through projects coordinated with neighbouring countries. However, only elements. /1479 established a priority list for the development of network codes and guidelines for electricity for the period from 2020 to 2023. Article 1 of this Decision provides for the development of harmonised rules regarding demand side flexibility, including rules on aggregation, energy storage and. Taking Denmark and the Nord Pool market as a case, the report focuses on what is known as short-term consumer flexibility or demand response in the electricity market.
