

# Does an outdoor power supply need to be waterproof

## Overview

---

All residential outdoor outlets are required to be weather-resistant; this includes outlets installed in the front and rear of your home on patios, decks and near pools and hot tubs. Even waterproof units need proper handling to maximize safety, performance, and longevity. This guide explores best practices for safely installing waterproof power supplies, so your projects remain both. A rain-proof power supply is designed specifically to remain functional even when subjected to rain of low to moderate intensity. To ensure safety and prevent tripping hazards, be sure to select a cord that is the correct length, neither too short nor too long. Always unplug your cord, storing it properly indoors when not in-use. It can resist water penetration to a certain degree, which might be limited to light splashes, brief exposure to moisture, or low - pressure water spray.
