

# Electric vehicle infrastructure russia

## Overview

---

"Now, as part of the Industrial Support for Transport Mobility national project, the government will allocate approximately 5.7 billion rubles in additional funding to deploy around 2,000 new charging stations and hubs for electric vehicles over the next three years. This is especially important for cities in Russia that have grown quickly because of industry, like those in Siberia, where environmental problems are particularly acute. However, several factors continue to hinder the. The number of electric vehicles registered in Russia increased by 27% in the first six months of 2024. The expansion of the fleet of this type of transport was influenced by support measures developed by the Government of the Russian Federation to stimulate consumer demand and develop the necessary. The electric vehicle (EV) market in Russia is steadily gaining momentum, fueled by global trends towards sustainable transportation and government efforts to encourage EV adoption. The Russia EV Charging Infrastructure Market is valued at USD 170 million, based on a five-year historical analysis. When consumer demand rises, automobile.
