

Energy storage photovoltaic panels connected to the grid

Overview

A grid-connected solar system, also known as an on-grid or grid-tied solar system, is a photovoltaic (PV) system that is directly connected to the public utility grid. This system generates electricity from solar panels and feeds it into the grid. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one.
