

Ethiopia energy storage for electric vehicles

Overview

The Ethiopian government has unveiled plans to expand the country's electric vehicle (EV) charging infrastructure, aiming to install charging stations every 50 to 120 km, according to an official from the Petroleum and Energy Authority of Ethiopia. In 2023, the country became the first in the world to ban imports of internal combustion engine (ICE) vehicles. According to the Ministry of Transport and Logistics, the country now has 100,000 EVs on its roads, accounting for roughly 8. If. Ethiopia is transforming its auto industry by adopting electric vehicles (EVs), driven by government policies, renewable energy investments, and rising fuel costs. The Grand Renaissance Dam is set to double capacity, offering stable electricity for the growing fleet. Officials say the transition will cut costs, improve trade balances, and create thousands of.
