

# European orders for photovoltaic panels

## Overview

---

The European Solar Charter, signed on 15 April 2024, sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector. Solar energy, in particular photovoltaics (PV), is currently the fastest growing renewable energy source in the EU. Last year, 56 GW of solar PV were. Solar panels imported or manufactured in the European Union are subject to various regulations, directives and standards. In addition, solar panels must be correctly labelled, documented, and tested. This guide. With regulations varying across member states and regular updates to EU-wide directives, maintaining compliance requires systematic monitoring and proactive adaptation of operational procedures. Successful compliance management hinges on three core elements: comprehensive documentation systems. The alliance and its members contribute to the massive, rapid deployment of renewable energy in Europe and the EU solar energy strategy, which aims to install over 320 GW of solar PV by 2025, more than doubling the 2020 output, and almost 600 GW by 2030.
