

Export tax rebate for solar rack components

Overview

Under a joint notice released by the Ministry of Finance and the State Taxation Administration, the existing value-added tax (VAT) export rebates for photovoltaic products will be entirely abolished starting April 1, 2026. This policy forces industry consolidation while raising international module costs 10-15% through 2026. While widely discussed, this adjustment reflects a maturing global solar manufacturing industry, not a disruption to solar supply, pricing, or project deployment. Global demand. China will scrap value-added tax export rebates for PV products from April 1, 2026, while cutting battery rebates ahead of a full phaseout, raising export costs for manufacturers and potentially pulling shipments forward into early 2026.
