

# Field Energy Communication Power Supply

## Overview

---

Modular DC power supplies are revolutionizing field power supply systems with their flexibility, efficiency, and intelligent features. Whether powering mobile network base stations, WLAN access points, or other remote devices, these power supply units offer unmatched adaptability. FieldConnex power supplies provide power to Foundation Fieldbus H1 field devices and enable communication between the field devices and the control system via one common type 'A' cable. A standard feature is an overall passive design— such as the impedance circuits and very low power dissipation. HART (Highway Addressable Remote Transducer) was developed by Fisher-Rosemount to retrofit 4-to-20mA current loop transducers with digital data communication. HART modulates the 4-20mA current with a low-level frequency-shift-keyed (FSK) sine-wave signal, without affecting the average analogue. The decentralized FIEPOS power supplies with high protection classes IP54, IP65 and IP67 were developed for flexible use directly in the field. From mission-critical computing and tactical infrastructure to beyond-line-of-sight (BLOS) connectivity, our solutions power RF satellite devices, ruggedized servers, network.

## Field Energy Communication Power Supply

---

### Power supplies with communication interface

PULS power supplies with an integrated EtherCAT ports can be connected directly to EtherCAT controllers - without the need for additional gateways, providing easy and rapid access to all ...
