Overview

Securing debt for BESS and hybrid projects requires a "bankable" revenue forecast from lenders preferred consultants. Developers need their own flexible modelling tools to optimise project design and achieve more favourable financing terms. Large scale energy projects integrating battery storage require significant capital. While equity investors bring cash and risk appetite, debt typically funds 50-75% of project costs. This Note also discusses the fixed and variable revenue sources available to battery storage projects based on the benefits they offer to electricity. Additionally, BESS can provide benefits such as creating contingency reserves, network upgrade deferral opportunities, fixed/variable charge reduction, etc. As per the International Energy Agency. From the UK's merchant-rich projects to Germany's first tolling-backed financing and Italy's future MACSE 15-year capacity-linked debt, the question is no longer whether battery projects can secure funding, but how they structure it. A few years ago, BESS financing was mostly reliant on corporate. In this article we consider the role and application of battery energy storage systems (BESSs) in supporting renewable energy power generation and transmission systems and some of the challenges posed in seeking to project finance BESS assets.
