

# Five rows of photovoltaic brackets

## Overview

---

The spacing of photovoltaic brackets is usually between 2. This is to ensure that the front and rear rows of brackets will not block each other's shadows, thereby ensuring the light utilization rate of photovoltaic modules. 5 meters and 3. Basic Information about Photovoltaic Brackets Definition and Function Solar brackets, also known as photovoltaic brackets, are structural systems used to fix solar panels. Solar electric power can be made available continuously for consistent on-off grid applications. It is environmentally friendly as well. This article will discuss the importance of spacing and provide guidelines for determining the appropriate spacing for solar panel holders. At Synwell New Energy Technology Development Co.

## Five rows of photovoltaic brackets

---

### Basic knowledge of fixed photovoltaic brackets

A PV bracket is a support structure that arranges and fixes the spacing of PV modules in a certain orientation and angle according to the specific geographic location,
