Rechargeable lithium batteries use safe LiFePO₄

Overview

Lithium-ion batteries stand out for their high energy density, lightweight design, and long cycle life, making them ideal for modern applications such as smartphones, EVs, and power tools. They charge quickly and are rechargeable up to 1,000–3,000 cycles. However, they come at a cost. A lithium-ion battery or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li^+ ions into electronically conducting solids to store energy. Compared to other types of rechargeable batteries, they generally have higher specific energy, energy density, and cycle life. Explore lithium-ion battery types, how they work, cell formats, safety advancements, Unico's expert insights, and future innovations driving efficiency in EVs and energy storage. Lithium-ion (Li-ion) batteries are essential to today's connected world. Understanding what a Li-ion battery is and how it works can help you make the right choice.
