

# Fuel cell standards for energy storage

## Overview

---

Information about regulations, guidelines, and codes and standards for hydrogen and fuel cell technologies. Codes and standards are implemented to ensure that processes and products meet uniform requirements. These requirements pertain to either safety or performance specifications. The Codes and Standards Group at the National Renewable Energy Laboratory (NREL) conducted an analysis of the full range of application demands and patterns. The growing need for decentralized (local or remote, residential or commercial) power generation calls for systems that maximize small-scale electrical efficiency. In fact, at 60% proven net electrical. Printed with a renewable-source ink on paper containing at least 50% wastepaper, including 10% post consumer waste. It applies to fuel cell modules with the following electrolyte chemistry:

- alkaline;
- polymer electrolyte.

## Fuel cell standards for energy storage

---

### IEC work for energy storage

IEC TC 21: Secondary cells and batteries, prepares International Standards for all types of batteries used in energy storage, including stationary (lead-acid, lithium-ion and NiCad/NiMH) batteries and ...
