

Grave platform solar power generation

Overview

The RIP project stands for "Requiem in Power," a fitting name that reflects its dual purpose of honoring the past while powering the future. This ambitious project, which expands the city's sustainable energy sources without taking up new land area, is part of Valencia's 2030. Whether it's investigating the financials of Elon Musk's pro-Trump PAC or producing our latest documentary, 'The A Word', which shines a light on the American women fighting for reproductive rights, we know how important it is to parse out the facts from the messaging. At such a critical moment in. A city in Spain is starting to use its cemeteries to generate renewable power. Valencia, on the east coast, aims to install thousands of solar panels in graveyards around the city.
