

# Guinea-bissau microgrid development

## Overview

---

This work studies the implementation of an isolated microgrid activated with photovoltaic energy and energy storage in batteries under the case study of the community of Bigene, located in the African country of Guinea-Bissau.

WASHINGTON, J- The World Bank's Board of Executive Directors approved a \$35 million grant to enable solar power generation and increase access to electricity in Guinea-Bissau. This type of project is a potential solution to the problem of access to. To promote investment and sustainable business models in both solar mini-grids and low-carbon bioenergy technologies.

Direction General of Environment/Secretariat of State of Environment, Direction General of Energy/Ministry of Energy, National Institute for Research and Applied Technology (INITA). Rural electrification has reached dozens of communities through the expansion of mini-grids and the projected construction of the national grid. To achieve this goal, a combination of grid (70%) and off-grid (30%) solutions will be required to bring 4 as people (33,000 households) by 2022. A low-hanging fruit opportunity to bring electricity to additio nevitably help to reduce emissions.

## Guinea-bissau microgrid development

### Promoting Better Access to Modern Energy Services through Sustainable

To promote investment and sustainable business models in both solar mini-grids and low-carbon bioenergy technologies.
