

# Guinea electric grid

## Overview

---

Revised in November 2021, this map provides a detailed overview of the power sector in Guinea alongside an inset showing West African Power Pool (WAPP) priority transmission project across West Africa. Three primary energy sources make up the energy mix in Guinea: fossil biomass, oil and hydropower. Biomass (firewood and charcoal) makes the largest contribution in primary energy consumption. [1] The potential. The OMVG transmission network has increased Guinea's electricity trade capacity to 340,000 KVA, up from zero in 2015, surpassing the original project target and enabling reliable cross-border energy exchange. Electricity production tends to closely match demand, which in turn. The Guinean government has announced a long-term energy strategy focusing on renewable sources of electricity including solar and hydroelectric as a way to promote environmentally friendly development, reduce budget reliance on imported fuel, and to take advantage of Guinea's abundant water. Guinea-Conakry has launched a National Energy Pact, targeting universal access to electricity by 2030 and a 67% share of renewables in its energy mix. 9 million additional people.
