

# Helsinki solar energy system application example

## Overview

---

In 2025, Helsinki redefined urban transit hubs with 16 kW solar systems, turning 50 bus stops into self-sufficient sanctuaries complete with solar-heated seating, real-time displays, and USB charging. Hot Heart is a visionary renewable energy project designed to meet Helsinki's carbon neutrality goals by 2030. Spearheaded by Carlo Ratti Associati, the project introduces a thermal energy storage system that integrates renewable energy sources to provide affordable and sustainable heating for. Solar photovoltaics (PV) has seen increased global adoption and decreased costs in the latest decades. The unifying aspect of the project is its location in the municipality of Nurmijärvi, in the Helsinki-Uusimaa region. The facility consists of about 15,000 lithium-ion battery cells, which can temporarily store the electricity generated by the solar power plants.

## Helsinki solar energy system application example
