## Overview

---

Wind-powered machines used to grind grain and pump water — the windmill and wind pump — were developed in what is now Iran, Afghanistan, and Pakistan by the 9th century. [1][2] Wind power was widely available and not confined to the banks of fast-flowing streams, or later, requiring sources of. People used wind energy to propel boats along the Nile River as early as 5,000 BC. New ways to use wind energy eventually spread around the world. Wind power is one of the oldest forms of energy. Initial investments into wind technologies were modest, yet as concerns over fossil fuels escalated, more countries started exploring.

## History of wind power station development
