

# Homemade solar power generation with screws

## Overview

---

This DIY project outlines the construction of an Archimedes Screw Turbine using PVC parts, which is an affordable and easily available material. Portable, weatherproof, and ready-to-rock — a homemade solar generator can meet all your power needs in and around your boat, camper, or cabin. Do you have what it takes to make one yourself?

My family owns a cozy off-grid cabin in the hills, but since there's no electricity, I'd only stay there. A DIY portable solar generator is an excellent project for individuals who want to harness the power of the sun while also having a reliable source of electricity on the go. Then all the relevant input and output sockets are wired and mounted on the outside of the case where they are easily accessible. It saves money and helps the environment. Solar power is becoming popular as people look for clean energy solutions.
