

# How big is a 230 watt solar light

## Overview

---

A typical 300-watt solar panel is 65. If you have a 1000 sq ft roof, and you can use 75% of that roof area for solar panels, you can theoretically put 45 300-watt solar panels on a 1000 sq ft roof. Utilizing 72 next generation SunPower all-back contact solar cells and an optimized panel design, the SunPower 230 delivers an unprecedented total panel conversion efficiency of 18. The 230 panel's reduced. Solar panel sizes are measured in two ways: watt output and physical dimensions. Physical dimensions refer to the height, length and width of the solar array. Each cell is 6 x. Originally introduced as a 200 watt module, this 60-cell format has a history of continuous improvement through Sharp's commitment to innovation and manufacturing excellence.
