

# How long can a 120 megawatt photovoltaic panel last

## Overview

---

Solar panel lifespan typically spans 25-30 years of productive operation, with many quality systems continuing to generate electricity for 40+ years at reduced but still valuable capacity levels, making them exceptionally durable, clean energy investments. Premium panels deliver superior long-term value: While premium panels with 0.25% degradation rates cost 10-20% more upfront, they produce 11.5% more electricity over 25 years compared to standard panels, often justifying the higher initial investment through extended productive life and better. If you're counting on solar to deliver long-term savings, it pays to understand what "lasting 25 years" actually means, and what you can do to make every one of those years count. While factors like climate, maintenance, and manufacturing quality can. Understanding the lifespan of solar panels is crucial for making an informed decision about installing a solar energy system. Reputable solar providers should also offer strong workmanship warranties (sometimes called a labor warranty) to protect your system's major components, such as the inverter and battery.

### How Long Do Solar Panels Actually Last?

You can count on most photovoltaic solar panels to last 25 years before they begin to noticeably degrade. Most solar panel companies will provide a standard 25-year warranty for the expected life ...

### How Long Do Solar Panels Last? - Forbes Home

Typically, high-quality solar panels have a degradation rate of about 0.5% per year. This means that after 20 years, a panel will still operate at around 90% of its original capacity. While solar ...
