

# How long can the aluminum-magnesium-zinc photovoltaic bracket be used

## Overview

---

Q3:How long can zinc-aluminum-magnesium photovoltaic brackets be used?

A:The anti-corrosion property of the hot-dip galvanized layer can last for more than 30 years. The inclusion of magnesium enables corrosion. A: Zinc-aluminum-magnesium solar brackets are compatible with most photovoltaic panels that meet industry-standard sizes and mounting hole positions, but may be incompatible with photovoltaic panels of non-standard designs or with special installation requirements. Zinc-aluminum-magnesium alloy is lightweight, high-strength, and corrosion-resistant, making the photovoltaic mounting system more stable and. Recently, researchers conducted a survey at the Qinghai Gonghe Photovoltaic Industrial Park in China, and the findings indicated that large-scale photovoltaic development has had a positive effect on the ecological environment of the desert. The hot-dip galvanization process forms a dense zinc layer on the surface, effectively preventing rust and corrosion, thereby extending the service life.
