

How long is the life of a small photovoltaic panel

Overview

Solar panel lifespan typically spans 25-30 years of productive operation, with many quality systems continuing to generate electricity for 40+ years at reduced but still valuable capacity levels, making them exceptionally durable, clean energy investments. The best solar panels are built for the long haul. Most are backed by 25- to 30-year performance warranties, and in real-world conditions, many keep producing power well beyond that. But lifespan isn't just about whether a panel still functions; it's about whether it's still delivering the return. Understanding the lifespan of solar panels is crucial for making an informed decision about installing a solar energy system. 9% of their capacity each year.
