

# How to avoid the flammability and explosion of photovoltaic panels

## Overview

---

Due to the potential of explosive gases, prevent all open flames and avoid creating sparks. Do not use water to put out. That's why the Solar Energy Technologies Office (SETO) funded the Solar Training and Education for Professionals (STEP) program, which provides tools to more than 10,000 firefighters and fire code officials to manage solar equipment as they put out fires. Learn more about the STEP funding program. These systems convert sunlight directly into electricity using semiconductor materials, which exhibit the photovoltaic effect. This fundamental principle underpins the growing appeal of PV systems, as. Installing a photovoltaic (PV) system on the roof of a building introduces new fire risks to the building. First, the PV installations have been shown to increase the chances of ignition through the failure of any of the electrical components of the system. Photovoltaic (PV) panels can be retrofitted on buildings after construction or can be used to replace conventional building materials used for roofs, walls or facades.
