

How to clean photovoltaic panels in winter when it snows

Overview

If you get frequent storms or long stretches below freezing, it helps to know how to remove snow from solar panels safely. The best DIY approach for most homeowners is a ground-based solar panel snow removal tool, like a solar panel snow rake with a foam or rubber head. Let's break down what actually works, what doesn't, and when snow removal really matters. ☐ Snow is overrated as a solar problem - Properly installed. Because heat can actually cause the photovoltaic cells that make up the panels to perform suboptimally, colder temperatures (especially colder temperatures without snowfall) are ideal for solar panel function. A study published in Science Direct showed that when the panels are too warm, they can. Winter snow can cut solar production when it builds up on your array, but you don't always need to take action. A light dusting often slides off or melts on its own. Heavy, wet snow can cover the modules long enough to block sunlight and push output close to zero until the panels clear.
