

# How to lift photovoltaic panels onto the roof

## Overview

---

To lift solar panels onto your roof, you can use a ladder railing system, a pulley system, a lifting bag, or even DIY lifting systems using a pulley. Carrying them up the ladder can also be done with products like the solar panel caddy, and all of these ideas will make this task. Installing solar panels on your roof isn't just about securing them in place—it's also about getting them up there without breaking your back (or the panels). If you're planning to DIY your solar project, make sure you consider this part of the process. Whether you're a solar installer or a DIY enthusiast, this method will save you time. Petehimself of HBPowerwall fame mentioned in his live stream today something about having issues lifting PV panels onto the roof, so I thought I'd share "my" (\*1) method. I use this to lift up 18kg panels onto my 3.7m tall roof, all by myself! It should be obvious how it works, but still. Roof Assessment Determines Installation Feasibility: Solar panels add 3-4 pounds per square foot to roof structures, requiring thorough evaluation of structural integrity, especially for roofs over 10 years old.
