

How to temporarily store the wires of photovoltaic panels

Overview

S clips are a low-cost and effective solution to keep wires and cables in place. The clips are usually made from stainless steel, which is strong and resists corrosion, making them great for outdoor use. Other options include aluminum alloys or even UV-resistant plastics. Wire Management Directly Impacts System Economics: Proper wire management reduces LCOE through decreased O&M costs, higher system availability, and extended component life. Quality wire management systems can reduce installation labor by up to 30% through tool-free installation and pre-planned. Use of standard grades of plastic wire ties is by far the most common method used by installers to support and secure direct current (DC) string wiring in an array. At least some of these standard grades of ties fail well before the useful life of the solar PV system. The result?

Cleaner, manageable layouts, more efficient. If you're planning your own system or reviewing a contractor's work, this guide will help you understand how to manage solar wiring the right way. This article explains how the free-air solar cable conveyance system by Snake Tray, the Solar Snake Max™, helps utility-grade.

How to temporarily store the wires of photovoltaic panels

PV Wire Management Systems Explained

Like S clips, wire hanger systems hold wires in place, but do it on a larger scale. Made from galvanized steel and coated with PVC, hangers are extremely durable and weather-resistant.
