

Hungarian Communication Green Base Station Construction Specifications

Overview

This chapter provides requirements and recommendations for designing communications site buildings, including equipment shelters and outdoor cabinets. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the. Taking the lead-acid battery pack of a 48V communication base station as an example, it is commonly configured with multiple 12V lead-acid batteries in series. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

Hungarian Communication Green Base Station Construction Specific

Our communication green base station

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and ...
