

Is energy storage a green energy industry

Overview

Energy storage systems must develop to cover green energy plateaus. We need additional capacity to store the energy generated from wind and solar power for periods when there is less wind and sun. Batteries are at the core of the recent growth in energy storage and battery prices are dropping. Transitioning to renewable energy is vital to achieving decarbonization at the global level, but energy storage is still a major challenge. This review discusses the role of energy storage in the energy transition and the blue economy, focusing on technological development, challenges, and. The International Energy Agency (IEA) emphasises that grid-scale storage, notably batteries and pumped-hydro, is critical to balancing intermittent renewables like solar and wind.
