

# Is it profitable to install solar panels to generate electricity

## Overview

---

Solar farming can be profitable, with average returns of 10-15% annually. Initial setup costs range from \$800 to \$1,200 per kW of capacity while operating costs are typically low. Revenue depends on local energy prices and solar irradiance levels. While the initial setup cost can be high. A solar farm is a big installation where we can see multiple photovoltaic (PV) panels that convert sunlight into electricity. Unlike rooftop systems, solar panels are installed on large open land and farms and supply power directly to the grid or to a wide range of commercial clients. As the global. Solar Investment Sweet Spot: Homeowners with monthly electricity bills above \$75 and electricity rates exceeding \$0. That being said, most homeowners experience a significant return on their investment. But new federal legislation has accelerated the expiration of the 30% tax credit for homeowner-owned solar systems, moving.
