

Is it safe to install photovoltaic panels on the ground

Overview

With kits available on the market, you can more easily and safely install a ground-mounted solar system than climbing on a roof to install one. Ground-mounted solar panels can be installed anywhere with good sun exposure and sufficient amounts of open space – a minimum of 350 square feet is usually required. Ground-mounted solar panels are also known as backyard solar panels, free-standing solar panels, and ground-mount PV systems. They take up a lot of space and require specific soil conditions.
