

Key capture battery storage

Overview

Following the addition of the 200 MW of Texan BESS, Key Capture Energy now has more than 620 MW of utility-scale battery storage facilities in operation across the United States. As the US electric grid is increasingly reliant on intermittent wind and solar power, battery energy storage helps to keep the lights on when the sun isn't shining, and. In this challenging landscape, Battery Energy Storage Systems (BESS) have emerged as a critical solution to enhance grid resilience in the U. BESS, which SK company Key Capture Energy develops, owns and operates, function as large rechargeable batteries that fundamentally transform how the grid. Two 100 MW battery energy storage (BESS) projects developed by Key Capture Energy have commenced commercial operations, bringing the company's total utility-scale BESS portfolio to more than 620 MW in the US. Announced 7 January, the projects are located in Denton and Grimes. KCE is backed by SK E&S, which has invested over \$2 billion in the US energy transition and brings deep industry expertise. It is located, ironically, on Electric Avenue in Blasdell. From the street, it doesn't look like much.
